Product catalog summary

Overview of CareTracker: CareTracker is a documentation system designed to improve the accuracy and efficiency of recording resident care information. It utilizes simple visual icons and touch-screen technology to facilitate quick and accurate data entry by caregivers.
Key Features:

- **Visual Icons:** Simplifies documentation with easy-to-understand icons, reducing learning time for new staff.
- **Secure Access:** Utilizes biometric thumbprint scanners or passwords for secure system access, ensuring each entry is time-stamped and signed.
- **Elimination of Paper Documentation:** Reduces errors associated with paper forms, such as copying and missed entries, and simplifies information retrieval.

Benefits:

- **Improved Accuracy:** Provides a precise picture of residents' conditions, enhancing the quality of care.
- **Increased Reimbursement:** Facilities have reported significant increases in Medicare and Medicaid reimbursements after implementation.
- **Risk Reduction:** Ensures documentation is complete and compliant, reducing liability risks.
- **Enhanced Quality of Care:** Monitors resident conditions and alerts staff to potential issues, allowing for proactive care management.

" CareTracker's simple visual icons are designed to help minimize reading and learning time. Even new staff will be documenting accurately and completely in minutes. Wall-mounted touch screens and portable iPads make it easy for caregivers to document resident observations and incidents as they occur. This means more frequent entries, better quality data, and more accurate clinical information about your residents. Simple picture icons with yellow backgrounds indicate categories the caregivers must complete during the shift. Once completed, the yellow turns gray indicating that at least the minimum... "

Streamline Communications with Physicians and Payers

Collaborator Secure Web Portal for Home Health and Hospice Agencies

From sharing patient information and collecting signatures on orders to reviewing authorization requests, physicians and payers play a key role in the workflow of home health and hospice agencies. Traditionally, the patient orders and clinical information captured in a patient's electronic medical record (EMR) are sent in a paper form from the agency to the physician or payer through mail or fax. This causes delays in signatures and authorizations, and can negatively impact patient care.

That's why Cerner developed Collaborator, a secure web portal designed to help agencies get authorizations and documents signed more quickly, leading to faster reimbursements and improved patient care. With Collaborator, patient information is sent electronically from Cerner's Home Care enterprise solution HomeWorks to the internet portal, where the physician or payer can log in and manage their tasks immediately. Orders and attestations signed in the portal can be received directly back into HomeWorks, updating all records for rapid turnaround. The internet portal facilitates increased collaboration in caring for patients between agencies, physicians and insurance case managers.

Increase Patient Care

Streamlined communications and collaboration using the web portal leads to faster, quality care for patients.

- Physicians can electronically view patient electronic medical records, providing them a comprehensive view of their patients' status.
- A list of patients is displayed upon login, enabling physicians to quickly review patient charts and sign pending orders.
- Insurance case managers using the portal can review patient charts to determine eligibility for authorization of services.

Simplify the Face-to-Face

Increased turnaround times for the face-to-face 30-day requirement can be achieved using the web portal, ensuring full credit is received for the care being provided to patients.

- With a simple login, physicians can review all pending face-to-face attestations for patients, and electronically sign them with the click of a button.
- A visual indicator of attestations due displays upon login.

Key Benefits

- [illegible]
- [illegible]

- Physicians can see the dates and times they have available for face-to-face encounters.

Strengthen Relationships

Increase the physician experience with the portal and increase referrals.

- Physicians can easily create referrals that automatically populate into the HomeWorks solution.
- The portal can be customized to include any agency's name and logo and can be embedded as a link on an agency's website for easy access.

Hospice of the Valley

Enabling Hospice Agencies to Focus on Providing Personalized Care

HomeWorks and RoadNotes for Hospice Care

Cerner is focused on helping loved ones and their families receive quality care, comfort and compassion during the time they need it most. That is why Cerner delivers software solutions that enable hospice agencies to focus on providing personalized care.

Hospice agencies of all sizes use Cerner's HomeWorkAs® and RoadNotes® solutions to improve patient care. HomeWorks is a fully integrated system designed to support the clinical, financial, administrative and management functions of hospice agencies. RoadNotes, its point of care counterpart, allows clinical staff to review patient electronic medical records (EMRs) and provide documentation during patient visits. The data entered into RoadNotes synchronizes with the HomeWorks system.

The solutions provide the tools needed to manage the entire life cycle of patient care, from intake to retention of archived records. Features like on-screen prompts, links and warnings promote consistency in documentation, reduce errors, simplify the documentation process and support regulatory requirements for reporting. Care plans are incorporated into the system.

Ease of Use for Clinical Staff

Intuitive, custom workflows provide a step-by-step guide through the clinical chart during patient encounters. Forms can be created to match agency documents, reducing training time.

The entire life-cycle of patient care can be managed with a completely paperless EMR, eliminating time spent on documentation post-visit. Consistent clinical documentation can be achieved through the streamlined data entry process. With a digital media archive, clinical staff can attach wound images, scanned documents and other images to the patient's EMR.

Supports Hospice Inpatient

The solutions are designed to support the functions of a hospice inpatient unit. Quick scheduling of patients' beds can be achieved using the census management feature. A graphic representation of facilities' floors, rooms and beds can be displayed. The administration of medications to patients can be documented using the Medication Administration Record (MAR).

Key Benefits

- Supports hospice care in the home, hospice inpatient and pediatric care
- Intuitive workflows provide a step-by-step guide through the clinical chart
- Ease of patient transitions with one submission between levels of care
- [illegible] 2012 Stark Conversation [illegible]
